

Sourish Merugumilli

+91 99693 51402 | sourish666@gmail.com | linkedin.com/in/sourish-merugumilli | github.com/Sourish2003

TECHNICAL SKILLS

Programming Languages: Dart, C++, Python, ReactJS, C#

Databases: Firebase

Libraries & Frameworks: Flutter, YOLOv8, TensorFlow, NumPy, Pandas, Scikit-learn, OpenCV, NLTK

Development Tools: Android Studio, Git, VSCode, Xcode, Google Colab, Tkinter

PROJECTS

Fragile Asset Tracking App

Jan 2023 – April 2023

Real-time Asset Tracking Mobile App Project with Flutter and Firebase

Flutter, Dart, Firebase, IoT

- Combined hardware with Flutter (Android Studio) + Firebase backend.
- Monitored asset transport using GPS technology, alerted on route deviations and excessive vehicle motion, resulting in a **25%** reduction in lost assets and a **15%** increase in delivery efficiency.
- 3D model shows live rotation, open-source maps enable real-time location

SmartReps Counter App with Wearable Guidance & Temperature Tracking

Aug 2022 – Dec 2022

Machine Learning and Wearable Technology for Smarter Fitness

Python, TensorFlow.js, Firebase, IoT

- Integrates real-time feedback and temperature tracking to enhance exercise safety and efficacy
- Combines web app, machine learning, and smart wearable to detect yoga poses and monitor skin temperature
- Promotes safe workouts, proper form, and informed decisions for optimal results

EXPERIENCE

Food Fitness Doctor and Patient App

November 2024 – June 2025

Flutter Developer at Quantasis Private Limited

Mumbai

Play Store Links: [Doctor App](#) – [Patient App](#)

Flutter, Dart, MVVM, Provider, Go Router, Dio, Firebase, Jitsi Meet

- Developed comprehensive healthcare applications using Flutter with MVVM architecture and Provider for state management, improving user experience by **13%**.
- Implemented secure authentication system with OTP verification and JWT token management, achieving **10%** reduction in unauthorized access attempts.
- Integrated video consultation functionality using Jitsi Meet with end-to-end encryption, reducing in-person appointment needs by **70%**.
- Built responsive UIs with custom components, theme support, and efficient loading states across both doctor and patient interfaces.
- Created robust family profile management system allowing patients to manage multiple family members' healthcare information with **80%** improved data organization.

Real-time Object Detection using YOLOv8 and Accurate Localization of Objects with Intrinsic and Extrinsic Camera Calibration

September 2023 – April 2024

Internship at Bhabha Atomic Research Centre

YOLOv8, OpenCV, Tkinter, Google Colab, Python, Albumentations, Labelling

Mumbai

- Leveraged machine learning to enhance industrial efficiency and safety by **27%**.
- Implemented real-time object detection on conveyor belts using YOLOv8 with **80%** accuracy.
- Integrated camera calibration for accurate object localization, reducing error margin by **15%**.
- Developed user-friendly GUIs for object detection and calibration.
- Improved model robustness through data augmentation and synthetic images, increasing detection reliability by **80%**.

EDUCATION

Shah and Anchor Kutchhi Engineering College

Mumbai

Bachelor of Engineering (B.E.) in Information Technology

August 2020 – May 2024

Relevant Coursework: DBMS, Object Oriented Programming, Computer Networks, Data Mining and BI, AIDS, Software Engineering.

Ryan International School, Mumbai

Mumbai

Secondary Education

August 2018 – March 2020

CERTIFICATIONS/COURSES

• Flutter Essential Training: Build for multiple platforms, LinkedIn Learning

July 2023 – August 2023

• TensorFlow for AI: Neural Network Representation, Coursera

April 2023 – April 2023

• Google Cloud Career Practitioners, Shah & Anchor Kutchhi Engineering College

December 2022 – January 2023
